

# YUKO Rope grease 39U

Print

## SPECIAL ROPE LUBRICATING GREASE.

### ENABLED PACKING

- Tin bucket 17,0kg

### Description

Intended to lubricate drilling and mine ropes, hoisting and transporting machine cables, operating over a wide temperature range from -25°C to + 50°C.

Used to protect against corrosion and to improve the performance of ropes (reduce friction and wear wire rope during work). Grease base are oil oils and solid hydrocarbons.

### BENEFITS

- increases ropes resistance to friction, deformation and rupture;
- washing out resistance;
- anti corrosion properties;
- save operation properties in a wide range of temperature;
- improved anti friction and preservation properties.

### Temperature range

### Typical characteristics

Dropping point, °C,	68
Funnel viscosity at 100°C	6
Thermal stability at 100°C:	
- volatility, %	0,2
Low temperature properties:	
- at minus 25°C	stands
