Adding Permissions to Article Topics

When you configured the permissions for the Anonymous group, you added the tiki_p_read_article permission. This allows anonymous visitors to read articles.

Tiki's robust permissions system makes it easy to add different permissions to different article topics.

1. From the Articles menu in the Menu module, click Admin Topics.

   The
   Admin
   Topics
   option
   in
   the
   Articles
   menu.

2. The Admin Topics page appears. Click the Permissions icon ( ) for the article topic that you created earlier.

   The
   Admin
   Topics
   page
   lists
   the
   article
   topics
   and
   allows
   you
   to
   create
   new
   topics.

3. The Assign permissions to topic page appears. Click the Edit Permissions tab.

4. In the Assign permission to this object area, assign the tiki_p_read_article permission to the Registered group and click Assign.

   Making
   the
   article
   topic
   readable
   only
   to
   Registered
   users.

   Tiki saves the information and reloads the page.

   Now
   only
   Registered
   users
   can
   read
   the
   topic.

Now log off as the admin. As an anonymous user, if you try to list the articles, TikiWiki shows that there are no articles available:

Anonymous
users
cannot
access
the
article.
