

### Skateboard Stops - Machined Stainless Steel

## Product Features:A choice of sizes and styles.

- Machined from solid 316 marine grade
- Machined from solid 316 marine grade stainless steel.
- Simple to install using readily available tools.
- Stronger than cast models which can be brittle.
- Skateboard stops can be spaced as required to prevent damage.
- It is recommended that the maximum spacing on continuous straight runs should be no more than 750mm apart.

# The damage caused by skateboarders will grind to a halt when they discover you have installed our Skateboard Stop Buttons

Damage to valuable community assets caused by inappropriate use of skateboards is a major problem. It leaves unsightly and often dangerous exposed edges to masonry along with damage to expensive street furniture. Skateboard Stop Buttons can help prevent this damage and alleviate costly repair bills.

Our skateboard stop buttons are of the highest possible quality being machined from solid marine grade 316 stainless steel, unlike some that are made from inferior brittle castings.

Available in seven styles and two sizes for different applications. They are economical to buy and simple to install using basic tools that are readily available to most maintenance and installation contractors.
