- Vertical lift requires very small footprint.
- Gate bollards protect sensitive roller door tracks.
- Standard 4.5 metre rail can be cut to any length.
- Aluminium rail includes hi-vis reflective panel.
- Kit includes gate post, boom and receiver post.
- Full installation service available.

Dock Boom Gate designed for elevated loading docks to prevent falling accidents

The Dock-Safe Boom Gate is designed as a safety barrier for raised loading docks and elevated areas to prevent fall accidents off the ledge. It is recommended to have the boom locked in the down position while the loading area is vacant and not in use. When the area is in operation, the boom can be easily released and lifted by one person with support from the adjustable spring assisted lifting mechanism.

Once activity on the dock is complete, the boom can then return to it's original locked position to form a safety barrier. This manual boom gate is ideal for industrial applications like warehouses, factories and distribution centres. Our Dock-Safe Boom Gates is available in a kits that include gate post, boom and receiver post..
