

Self-Closing Swing Gate

Product Features:

- Self-closing swing gate
- 5-metre beam can be cut to size
- Adjustable hydraulic spring-assisted closing mechanism
- Wall mount or post mount installation options
- Use in pairs for wider openings
- Locking pin feature enables gate to be held open at 90°
- Locking pin is designed to accept a padlock

Self-Closing Swing Gates offer versatile solutions tailored to warehouses, factories, and car parks, ensuring a safe and efficient workplace pedestrian traffic management system.

Designed for industrial and commercial applications, these gates boast a freestanding structure with the convenience of left- or right-hand operation, catering to various entry configurations. A standout feature is the adjustable hydraulic spring-assisted closing mechanism, guaranteeing that the gate automatically closes securely behind individuals passing through, maintaining a controlled access environment.

To enhance visibility and safety, each gate is equipped with a 5-metre-long aluminium beam, finished in a vibrant yellow powder coating. Additionally, a high-visibility red/white reflective panel further highlights visibility, making the gates easily noticeable even in low-light conditions or dimly lit areas. Versatility is key when it comes to installation, and these gates offer multiple options. They can be mounted on walls or on bollards/posts, providing flexibility depending on the requirements of your facility. A choice of round or square bollards are available for purchase. The bollards can serve as optional mounting points for the self-closing swing gate as well as being used as receiver posts in a closed or open position. A wall receiver bracket is included with each unit. A locking pin feature allows the gate to be held open at 90° or locked closed. It can also accept a padlock to provide authorised access only.

Barrier Group Self-Closing Swing Gates are designed to make the workplace safer and more organized. They are built strong and easy to use, with bright hi-vis and reflective materials to be easily seen. These gates help prevent accidents and control where people can go, making sure everyone stays safe. They also keep foot traffic separate from vehicles, and mark off dangerous areas.
