

## Retractable Bollards

### Medium security parking and access control bollard

Retractable bollards are designed for medium security applications such as traffic and parking control. They offer a simple, trouble free operation proven over many years of installation.

The retractable bollard is now available with a choice of two different materials. The BR900 has a 5mm thick mild steel bollard that is galvanised before being powder coated in hi-vis safety yellow with two reflective bands. The BR900-SS has a 3.05mm thick 316 marine grade stainless steel bollard. As this model is designed for more architectural applications it does not include reflective bands.

### Locking Procedure

#### Step 1

Insert key so that handle is facing out on 'short' side of the cap

#### Step 2

With the key inserted, rotate in counter-clockwise direction. The bollard should now be unlocked

#### Step 3

Lift bollard until fully extended.

**Note:** A retractable bollard should not be used where high security locking is required, such as car yards etc. For these applications insurance companies insist on our Cam-lok Removable Bollards.

### Product Features:

- Round 90mm diameter bollard locks in both extended and retracted positions.
- Mild steel hot dip galvanised with a powder coated finish or 316 marine grade stainless steel.
- Galvanised in-ground casing.
- Black anti-slip top surface and two reflective bands on powder coated model.
- Two unique, low cost 'T' handle keys supplied per order with additional keys available for purchase.
- Trouble free design with only two moving parts.
- Internal locking system can't be tampered with or fouled by dirt or water.

Code	Image	Product Name
