Configuring Menus

Menus are one of the primary methods that visitors will find their way through your website. Menus are typically shown within a module (as in the Menu Module) in your Tiki. Later, you will learn how to include menus elsewhere.

**TIP**

You can watch a short video that demonstrates this procedure.

By default, Tiki includes a single menu that includes all options. Visitors are automatically shown only the options to which they have access.

**NOTE**

Currently, the default site menu is visible only to Registered users. Anonymous visitors will not see a menu in the left column. To display the default menu for Anonymous visitors, change the Group for the menu module to Anonymous... you ((already know how!
