Creating a Menu from a Wiki Structure

Previously, you learned how to create a menu and add options to the menu, as well as creating a menu from a wiki page. You can also use the Structure menu module to create a menu from a wiki structure.

To create a menu from a structure:

1. Create a new structure and add several pages to the structure.

![Structure: My Second Tiki Structure](image)

2. Assign the **Menu** module to your Tiki layout. Refer to Adding Modules if you’ve forgotten how.

![Assign new module](image)

3. Click **Module Options**.

4. On the **Basic** tab, be sure assign the module to the **Left** column, position 30, and assign it to the **Anonymous** group.
You can ignore the error... you'll fix it by assigning the structure you created to this module.

5. Select the **Module** tab in the **Edit this assigned module** area.

   ![Module tab screenshot](image)

6. In the **Structure** field, enter the name (or ID) of the structure that you created in **Step 1**.
   In the **Type** field, select **Vert**. This creates a vertical-oriented menu that will fit in the left column.

   ![Structure field screenshot](image)

   **TIP**

   As you begin typing in the **Structure** field, Tiki will attempt to display any existing structures (names) that match what you type (that is, autocomplete).

7. Click **Assign**. Tiki saves the information and displays your new structure-based menu in a module. The **My Structure Menu** module contains the links (that is, the menu items) from the wiki structure.
Anytime you edit the structure (such as by adding or deleting pages), the changes will automatically be reflected in the **My Structure Menu** module!

---

**NOTE**

See the Tiki documentation for detailed information on all of the parameters of the **Menu** module, including how to show or hide specific levels of the structure.
