Displaying Articles in a Module

Do you remember how you added a module to display blog posts in the right column? You can do the same thing for articles. You can display lists of articles (such as the most recently posted and most popular) in a module. This provides visibility to new items on your website.

From the Main menu:

1. Select **Settings > Modules**.

   **Tip**
   
   You can also access the Admin Modules page by clicking **Modules** in the Quick Admin area.

2. On the Admin Modules page, click the **Assigned Modules** tab.

3. On the Assigned Modules tab, click **Add Module**.

4. In the **Assign new module** area, select the **Articles** module as the Module Name. We will configure this module to display the last (most recently added) articles.

   ![Assign new module area of the Admin Modules page.](image)

   Click **Module Options**. Tiki reloads the page. The Edit module tab area now shows additional options, specific to the selected module.

5. On the **Basic** tab, enter the following information in each field:
   - **Module name**: Select the **Articles** module.
   - **Position**: Select **Right**. You will add this module to the right column.
   - **Order**: Select **10**. The Newest Blog Posts and Newest Forum Posts modules are already on the right column. This will place the articles module under the Login module.
   - **Groups**: Select **Anonymous**, so that all visitors can see the module.

     **Tip**
     
     You can use this setting to "hide" modules and make them visible only to selected groups.

6. On the **Module** tab, enter the following information on each field:
   - **Sort**: Enter **created**.

7. On the **Appearance** tab, enter the following information on each field:
   - **Rows**: Enter **5**. Now the module will display the 5 most recently added articles.
8. **Click Preview.** Tiki reloads the page and shows you a preview of the module.

   **NOTE**
   Since you only have 1 article, the module only lists 1 item.

9. If everything looks good, **click Assign.** Tiki prompts for confirmation, then saves the information and reloads the page.

   The Last Articles module now appears in the right column.

   **NOTE**
   You may have to **click clear cache** on the Admin Modules page.

See the Tiki documentation for information on all the available article modules.
