Displaying Forums in Modules
Do you remember how you added a module to display blog posts in the right column? You can do the same thing for forum posts. This allows your site’s visitors to quickly see new topics and threads.

From the Menu:

1. Select **Settings > Modules**.

   **TIP**
   You can also access the Admin Modules page by clicking **Modules** in the Quick Admin area.

2. On the **Assigned modules** tab of the Admin Modules page, click **Add Module**.

3. In the **Assign new module** area, select the **Newest Forum Posts** module as the **Module Name**. This module will display the newest (most recently added) posts to the forums.

4. Click **Module Options**. Tiki reloads the page. The **Assign new modules** area now shows additional options, specific to the selected module.

5. On the **Basic** tab, enter the following information in each field:
   - **Position**: Select **Right**. You will add this module to the right column.
   - **Order**: Select **10**. The blog module that you added earlier is in position 5. This will place the forum module under the blog module.

   **TIP**
   Always give yourself extra spaces between module ordering. This will help if you later want to insert a new module.

   - **Groups**: Select **Anonymous**, so that all visitors can see the module.

6. On the **Appearance** tab, enter the following information in each field:
   - **Rows**: Enter **5**. Now the module will display the 5 most recently added forum posts.

7. Click **Preview**.

8. If everything looks good, click **Assign**. Tiki saves the information and reloads the page.
The Newest Forum Posts module now appears in the right column, under the blog module.

NOTE
You may have to click clear cache on the Admin Modules page.

See the Tiki documentation for information on all the available forum modules.
