Using Structures

A **structure** is a method to organize a group of wiki pages into a book. Tiki automatically adds navigation aids (such as next and back links, breadcrumbs, and sections) to wiki pages that belong to a structure. Structures allow you to create a specific browse sequence for your site’s visitors.

**NOTE**

The pages in this guide, *Tiki for Smarties*, belong to a **structure**.

Pages in structures also contain the following extra buttons:

- previous/next page, parent page
- home page of structure
- display entire structure

Before you begin using structures, you must enable the feature.

1. From the **Administration: Wiki page**, click the **Features** tab.
2. On the Features tab, enable the **Structures** option.
3. Also enable the **Open pages as structures** option. This tells Tiki to include the structure-specific navigation aids when displaying a page that belongs to a structure.
4. Click **Apply**. Tiki saves the changes and reloads the page.

**TIP**

You can watch a short video that demonstrates using structures.
