Using the Control Panels

With Tiki, you can complete all configuration and administration tasks from your Web browser, simply by using the Control panels (Administration pages).

Using the Quick Administration module

Use the Quick Administration module (enabled by default on a new Tiki installation) to quickly access some of the most common Control panels.

By default, the Quick Administration module contains the following buttons

- Wizards
- Control panels
- Themes
- Users
- Groups
- Permissions
- Menus
- Clear all caches
- Rebuild search index
- Plugin approval
- Logs
- Modules
- Scheduler

To access the main administration page, select the **Settings > Control Panels** option in the Menu module.
You can also access the Administration page by typing \texttt{http://www.yourdomain.com/tiki-admin.php} in your web browser or by clicking \textbullet \texttt{Control Panels} in the \textit{Quick Admin} links.

The Administration page provides links to each section's own administration page. Features that have not been turned on are shown "grayed out" (such as the Blogs, in the example below).

Use the \texttt{Help} \textbullet button (available on all administration pages) to find detailed help from the Tiki documentation.

\textbf{Using recent preferences}

Tiki automatically remembers each control panel or administration option that you access.

Use the \texttt{Recent Preferences} \textbullet option in the Quick Administration module to quickly return to any previously configured option.
Finding and filtering preferences

Tiki has thousands of features, options, and settings. To help new administrators, use the Preference Filters to display only the most common options. If you are following along with this guide, be sure to enable the Basic and Advanced filters.

**TIP**

Use the Preferences Search to quickly find any Tiki setting or option on any administration page.

**NOTE**

By default, Tiki uses an English language interface. However, Tiki has been translated into more than 40 languages. To use Tiki in your language:

1. Click the i18n button.
2. On the Administration: i18n page, use the Default Language field to select your language.
3. Click Save.

IN THIS SECTION

- Configuring General Options
- Configuring User Logins
  - Registering as a New user
  - Understanding Groups
    - Creating Groups
    - Assigning Users to Groups
- Configuring Tiki Features
- Configuring the Layout
- Adding Modules
