Using the Layout Options

By now, you should be able to customize the layout of your Tiki. You know how to:

- Use the General Layout options to turn on (or off) the different parts of Tiki.
- Add and remove modules to the left and right columns of your Tiki, as well as how to re-order the modules and configure which modules appear for which users.
- Create menus to help users navigate your site.

In this section, you will change the theme (sometimes called a "skin") of your Tiki

**NOTE**

You can further customize your Tiki by using the Look and Feel feature, which will be discussed later.
